DETAILED ACTION

Drawings

This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 5, and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Gibson (6,640,340). Gibson shows an infant swaddling blanket 10 that comprises an irregularly shaped body 12 as shown in Figure 1 that is folded over on a line 20 to form an upper panel 14 and a lower panel 16. The opposed edges of the panels 14, 16 are joined together along edges 22, 26, with a center panel then being formed defined by fold lines 42, 44 as shown in Figure 2. The center panel defines a pocket between the upper and lower panels that can receive an infant as shown in Figure 4, with a first arm 30 being defined by the edge 26 and fold line 44, and a

second arm 40 being defined by the fold line 42 and edge 22. Note that the arms are differing in

size and/or width. The arms can be folded over the top of the infant as shown in Figures 5 to 9.

Claims 1, 2, and 5 are rejected as being anticipated by Dern (1,584,853). Dern shows an

infant swaddling blanket that comprises a square panel 10 of textile material turned on one edge

to define four corners 19, 21, 24, and 25. A back panel for receiving the infant is thus defined by

a pair of side folds and a bottom fold shown as dotted lines in Figures 2 to 5. A pouch 17 is

attached to the back panel and can be folded back to receive an infant, that pouch can then be

folded back and secured along its edges to the blanket panel. The bottom edge of the pouch is

adjacent to the bottom fold line of the back panel. After the infant is placed within the pouch a

bottom flap is folded over the pouch as shown in Figure 4, and then a first blanket arm shown as

the upper triangular flap in Figures 2 to 5 is folded down over the infant. The second blanket

arm shown by the bottom triangular flap is then folded up and over the infant to form the pouch

shown in Figure 1.

Allowable Subject Matter

Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would

be allowable if rewritten in independent form including all of the limitations of the base claim

and any intervening claims.

Claims 7 and 8 are allowed.

Conclusion

Art Unit: 3673

The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure. Lear, Berger, Ruefer, Schneider, Mohler, and Crosby show infant swaddling blankets

that are of particular interest.
